

## Commissioned Productions

### Aim

To deliver the results our clients want at the most competitive value.

### Include the following features

- High quality video
- Database driven content
- Links to Learning Management Systems
- Animations, voice overs and interactions
- Pre and post course testing
- User tracking facilities
- Content management and editing tools
- Learner feedback

### Process

- We can help you analyse your needs, formulate the response that best fits your corporate objectives, and then make the business case for investment
- We will create a clear budget for the project that we will stick to
- You get complete control and sign off against project milestones laid out in a production and quality plan
- We produce learning objectives giving clear statements of what the production will achieve
- Content, scripting, interactions and tests prepared by experienced training professionals
- Payment is against milestones set out in the production plan

### Typical applications

- Induction programmes
- Sales and marketing skills
- Customer service skills
- Product knowledge
- Technical training
- Business and management skills
- Health and safety training

### Combine Amtek media with your own material for a custom solution

For the most cost effective solution why not include existing media from Amtek's library with your own custom content? You get the best of all worlds; a custom look and feel, custom content and proven to work media and exercises.

### What the users say

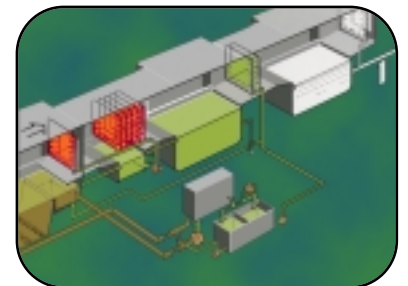

#### Client: Shell Oil UK

"Amtek understood our needs and provided all the solutions. They worked very closely with our safety team developing the content and style. We had approval at all stages of the production from the initial story boards, through script development and still and video shoots. During development some significant changes took place at our location, necessitating some fairly major alterations to the original contents and script. Amtek adapted the product with minimal effect to delivery date and with no significant impact on cost. They provided a complete bespoke package including hardware and installation and even designed and supplied a special certificate for successful inductees with a press-out section which fits easily in a wallet. Everyone who has seen or used the new system here on site has been impressed. Not just with its ease of use and good looks but with the way the programme holds your attention, keeps you interested and most of all delivers the message. We are currently talking to Amtek about adding an Environmental/Waste management to the section to the programme."
